General Comment

I am writing to ask that the government deny OpenAI the ability to train on copyrighted material.

I don't understand why decades of copyright law are suddenly out the window just because one company claims that they can't deliver on their goals unless they're able to violate it. If OpenAI as a company is unable to deliver on its goals, on their own terms, then why should they be given extra help to succeed? Is this really aligned with our country's great history of industry? The core of the American dream is that you're able to make your own way, on your own terms. This is also essential to the spirit of capitalism. But now, again, here is a company like OpenAI claiming that they're incapable of developing an effective product, unless they're able to steal from copyrighted works. This makes no sense to me.

Why can't they source from public works, that have moved out of copyright domain? Why is this brand new industry, which has yet to prove itself, allowed to skirt laws and norms that have applied through copyright law? Can't we at least put laws into place first, where creators can sign an agreement for their works to be used for AI training? Wouldn't it make sense to allow a creator to benefit from their own work, in the same way that movie studios must sign contracts first, before moving forward with an adaptation/production.

I think it's premature, and that OpenAI is overstepping as a company. I think if the government permits this, they open themselves up to additional lawsuits, which could be avoided if they were willing to work with creators first, rather than taking directions from a single company. I will also add that a recent case, Reuters vs. Ross Intelligence, ruled against AI's access to copyright law. There is also currently an ongoing case with Meta. With these as established precedent, I can't see how this doesn't lead to further litigation, and a huge waste of government time and resources while trying to decide on a request that has already been cemented via copyright law.

Please deny OpenAI's request to train on copyrighted material. Please consider the implications of this sort of request, and the amount of power and license you are considering handing over to a single corporation. Thank you so much for your time.
