General Comment

Generative AI is not a boon to the US economy or to US security, it is a plague. Its energy requirements are ravaging the US power grid and calling for even more reckless expenditure of precious resources, accelerating the incidence of climate disasters. It is destroying the livelihoods of millions of skilled individuals by literally stealing their work in order to process and regurgitate inferior and inaccurate copy. It is undermining the cognitive abilities of US citizens by eliminating critical thinking and creative skill acquisition. It is morally, logistically, and intellectually wrong to pursue this technology without stringent regulations to protect the environment and the people whose work is being exploited. The motive behind this action is pure greed and laziness and ought not be tolerated, much less debated. Do not make it easier for these AI developers to run their destructive scam on this country.
