

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-wkym-kk5v
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-3942

Comment on FR Doc # 2025-02305

Submitter Information

Name: Anonymous Anonymous

Email: [REDACTED]

General Comment

I am a physical media artist who shares photos of their work online and now see people claiming such work is AI generated or asking for the impossible based on AI imagery. While this may seem inconsequential to those outside of this line of work, it has impacted photographers, artists, sewists, theater, and more through the inability to share their work without fear of it being stolen, misrepresented, or denied.

I am also a graduate of agricultural studies. Even now I am seeing mishandling in the care of crops and livestock due to misinformation spread by AI.

I cannot search for information without AI summaries that are more often than not incorrect and dangerous. AI gives misleading or incorrect information that can lead to safety and health concerns. I have read multiple AI summaries claiming that vapors from certain glues or resins are safe to breathe when they are known causes of cancer and respiratory diseases.

AI creates misinformation that is not being controlled. AI spreads false information to vulnerable people who do not understand the technology. It can be used to create deep fakes and scams through both images and written words. It can harm people of all ages by creating nonconsensual and false pornographic imagery, including minors, who are not being protected by the people who claim to champion them. The AI that these people want is not the same AI that detects cancer and should not be protected or allowed free reign over human creativity or rights.
