General Comment

Generative AI is a flawed and dysfunctional technology that is built on plagiarism and theft of copyrighted material and does immense damage to the environment as part of its basic operation. It's also presented and marketed in wholly inaccurate terms, convincing people and corporations alike that it has utility that it does not have and may never have. Giving this technology the legal cover to operate outside the bounds of current copyright law, without any regulation of its environmental impact, would cause severe damage to the natural world and our culture.
