General Comment

AI should not be allowed to train indiscriminately on copyrighted or sensitive material. Allowing such an act will encourage companies to replace people with computers and further contribute to a brain drain of American creatives, engineers, and other digital workers to other countries. This will reduce American profit and potential.

AI companies need to be responsible for the data that they train on and should not be shielded from legal or financial consequences if they harm another's livelihood, leak personal data, or otherwise cause harm to the American public.

The end result does not justify the means here.
