General Comment

AI is overhyped to an extreme and big tech companies are trying to make good on a faulty investment with a product that does not benefit the American public. It relies on theft of copyright and intellectual property to train its systems, and spits out content that at best serves the same purpose as Google, and at worst can be wildly factually incorrect. Additionally, beyond the theft of content to build the systems, AI actively takes jobs from American workers, in both creative and non-creative fields. Investment in AI will bankrupt the American public intellectually, economically, and ethically. AI should not be endorsed or bolstered by US laws and lawmakers.
