General Comment

The U.S. government should not be working with companies like OpenAI or others that do not protect or compensate content creators or recognize the primary sources for the information they aggregate. Citizens, consumers and creators must be protected from companies that want to profit off of the work of humans. AI can be a powerful tool if it comes with protections and proper compensation for human labor as well as safety and ethical controls. Closed LLM systems with proper privacy controls are the preferred option to explore. Our national AI policy should not favor large corporate interests over that of We the People.
