General Comment

I am submitting this comment to the National Science Foundation in regards to document 2025-02305 (90 FR 9088), the so-called Request for Information on the Development of "Artificial Intelligence" Action Plan. (note: I will be referring to "ai" exclusively in quotes because there is currently no true artificial intelligence in existence) Specifically, I wish to address the possibility that, via this proposal, generative "ai" companies such as OpenAI et al will be given free legal reign to steal artists' work for use in training data without consent of or compensation to the artists involved. This is a blatant violation of the rights of artists to their own work. We pour our blood, sweat, and tears into every piece we make, and allowing just any random joe schmoe to throw it into a program and type in a little blurb to make it churn out slop is an insult to anyone who has ever bothered to pick up a pencil. Generative "ai" is being used to replace, and thus take jobs from, human artists by scraping and stealing their hard work. That's just the issues that's personal to me as an artist, let alone the bigger issues: so-called "ai" wastes tens of thousands of gallons of water per day in the SMALL data centers, and rampant "ai" use in governmental affairs is legitimately dangerous, especially if it is used in areas such as law enforcement and national security. These generative programs are used in ways that rob Americans of their livelihood and potentially their physical safety. A more appropriate approach would be to dissolve companies such as OpenAI and limit the usage of programs like Midjourney, ChatGPT, Google's Gemini, Microsoft's Copilot, etc., but I am unfortunately extremely aware that asking this administration to take the appropriate approach to pretty much anything is a hard ask.

Also, let's think about this practically for a second: if this passes, do you honestly think big media companies such as Disney will let this stand? They're already responsible for most of how copyright law works nowadays anyway, and while I personally don't care for what they've done I know for a fact that they will absolutely wreck house if something gets in the way of their iron grip on their IPs. I'm just warning you about the inevitability.
