General Comment

Hello, I am a writer who shares my work online, as well as an avid consumer of many art forms. I do not think the proposed regulations give enough consideration to protecting artists from having their work non-consensually consumed by AI models. I, and most artists I'm acquainted with, do not want their hard work used by AI to develop facsimiles of world of art. Furthermore, I believe that in this age of rampant misinformation, AI is more of a threat than an opportunity. The more advanced it becomes, the more the public will be inundated with fake stuff. AI does not represent the pinnacle of human innovation or beautiful art: that only comes from exercising and stretching our minds and putting forth effort. The federal government should be promoting that kind of work, and education, inspiring folks to reach their potential--not getting caught up in an AI arms race. That is completely misguided and antithetical to the human experience.
