General Comment

I do not approve of this plan going into effect.

All creative fields has been getting hurt by generative AI. Their work is taken and used to train AIs to generate the same type of work that humans make. This is resulting in AIs being used to replace the artists that the AI learned from.

Removing these restrictions for generative AI would effectively kill the job market for these artists, and it wouldn't stop there.

For well over a year, I've seen the field of computer science deal with large layoffs. Almost 25 thousand people in January 2024. Only a fraction of those layoffs are the result of humans being outsourced by robots, yes. However, the issue is still very real. It has already gotten to the point where entire video games are being developed by AI. From the sprites, to the code.

I'm in my mid 20s, and I chose a degree in computer science, thinking that it would provide good and secure work for me. I'm a few months away from graduating and I can't say I still feel that way. If this plan goes into effect, I can't imagine very many lines of work would be secure anymore.

AI is already being used to outsource real, hardworking humans. By allowing AI to train off of the things that are under copyright laws, AI would develop further by huge amounts. And that development and advancement would almost immediately be abused to further leave human without jobs. Writing, illustrating, translating, acting, and even programming is being replaced by programs.

The government is supposed to work for the people. To better their lives. Allowing companies to ignore copyright laws to train their AIs would do nothing but hurt the people the government is supposed to help and protect.
