General Comment

Generative AI, as it exists currently, can only be explained as a rampant "plagiarism machine." A machine that steals, copies, and regurgitates ideas, images, and text that are presented to it. It does not give credit to the artists it takes from, and it does not even yield a sustainable product, much less a quality product. Images and other products created by current Generative AI is subpar in many respects. Images have too many fingers, eyes are unfocused, metal melds with wood. Beyond the simple shoddy nature of these "products," this also takes REAL work, money, and time away from authors, artists, and other creatives, that can be making revenue and stimulating the economy, whereas Generative AI has exorbitant energy costs that so far have ONLY outweighed its supposed usefulness. Vote for the economy and vote AGAINST Generative AI.
