General Comment

Allowing generative AI models to train on copyrighted data without permission is not only immoral theft with significant potential knock-on effects for copyright law in the future, it also does not fix the many other issues with these models.

They will continue to consume massive amounts of electricity and water resources to create nothing much of value.

Their outputs will continue to have no fidelity, forcing anyone who uses them to look up information to continue to fact-check any information they see, eliminating any point in using the model to begin with.

They will continue to be completely derivative of the data they're trained off of, making them incapable of "creating" anything truly new.

And their public image as a technology that's being forced into everything with no practical use or value will only worsen.
