General Comment

Artificial Intelligence is a threat to artists and consumers alike. It is understandable, in the pursuit of greater informational defense and the general interest of technological evolution, to prioritize its development as the next stage of modern computer science but the dangers they present to the average artist and in fostering the creative spirit of the American people are multifaceted. Visual learning models are rife with proven accusations of IP infringement and of their ability to generate illegal explicit material at a rate that would require entire teams of human artists to produce. Secondly, it has caused and will continue to cause great financial and emotional harm to the artists that this country has called on again and again to further our dominant film industry through Hollywood.

This is, of course, not to mention the rampant and explosive potential that such access to public use has and will cause. It contributes to rapid and expansive misinformation, an epidemic that has eroded trust in the various information streams that fuel social media. If these companies are allowed unfettered access to public data streams without recourse, there is no man, woman, nor child that will be safe from its reach. The artists will see their work reproduced without a cent to their name, the actor their likeness replicated without a claim to their image, the musician violated by the same members of society that consume their music without thought.

It is a world unimaginable and the creative spirit of the American people will suffer. I, in no uncertain terms, oppose this decree and will continue to resist these mechanisms with all my ability. It is uniquely counter to the American spirit and aids our position as a technological superpower in no meaningful way. It will divide us further.
