

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-wqos-6830
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001
Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479
Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4012
Comment on FR Doc # 2025-02305

Submitter Information

Name: William Dillon

[REDACTED]

General Comment

The term "AI", as its currently used, is little more than a search engine. The training data is fed into a large probabilistic model that free associates words together.

These tools have little, if any, value. They frequently "hallucinate" due to their probabilistic design. They have no notion of truth or accuracy. Their only value is to create a list of words that approximate a sentence to the reader.

That said, what they're good at is regurgitating the input that they receive. This input is the real contributions of human effort. The allowance of fair use to their training on copyrighted material is an affront to the human effort used to create what they receive.

Furthermore, what we're seeing in the market has the classic signatures of a speculative bubble. The "AI war" is nothing more than a competition between the hucksters vying for supremacy in the eyes of the investors. The only way to win is not to play the game.

I do not support changing copyright law to favor AI use. And I do not support assigning copyright protection to the output of AI models. This is a flawed business that shouldn't be allowed to exist.
