General Comment

As a graphic designer and artist, AI has personally affected me.

Far too many art portfolio and hosting websites have opted many artists into AI scraping without their consent, leaving many designers and artists fearing their work being stolen/scrapped without consent or respect for their boundaries.

AI has repeatedly overused power to maintain it while its makers have no respect for copyright laws, royalty agreements, or the work of artists by stealing contracted work under NDA's and other legally binding contracts. This opens the field for an upsurge in litigation and lawsuits.

Businesses for artists and designers have become more difficult to be hired, with businesses opting for AI over real designers who have worked hard to polish their skills while providing their best services, all in the name of "quick" products of poor quality created by stealing.

There is also the fact that the AI makers have claimed they could not "pay" artists any royalties as they claim they have "no way" to source them and yet these programs need only the text prompt of the name of an artist from social media to copy and implement AI to take their style. This is nothing but theft, rampant and unchecked, and it will continue to get worse.

AI is not the next paragon of human ingenuity. This will completely destroy entire sectors of the job market. But even then, AI creators will not be content to stay in one place. Left unchecked, AI will spread to other industries and ultimately be the death knell for our economy and our country. This is a technology we still do not have a full and proper understanding of. AI creators can only see the profit and not the consequences of what they're doing. It will not stop until it consumes every facet of our daily lives.
