General Comment

The way this is stated is that any copyrighted material is legal for them to use as they please. This would include other AI programs using other AI to train their models. Removing the legal block of using copyrighted material would hamper the future of America in the favor of "progress". How many people would get affected by this? Millions would be affected. Not just artists or writers but programmers, voice actors, script writers, game developers and office workers to name a few. Once they lose their work where does the money come from? No one but a handful of people will have money to spend on anything because there would be no legal recourse for people not to have their content or material used in AI against their wishes. This will hurt America's people and it's long term interests.
