General Comment

I work as a product manager in Software as a Service (SaaS) companies that focus on field engineering and maintenance.

As someone working in tech, I feel that generative AI is overhyped. Some 60% of queries answered by AI are incorrect in some form or fashion, and adding training data will not solve this issue. Moreover, the environmental impact of generative AI will, if it is not already doing so, take electrical power away from American citizens in some of the least-served areas, and I do not feel that the current administration's plans to supplement power generation are going to help the ongoing climate crisis we're in. The so-called demand for better training data impacts friends and family who work in creative fields by stealing their (copyrighted) work and feeding it into the mill of "content" and regurgitating it on demand.

In short, I do not feel that generative AI companies should have access to private and/or copyrighted data without consequences, and this AI Action Plan seems to be geared to freeing them from those consequences. I do not and will not support this "action plan".
