General Comment

AI has proven to be not only a failing industry but it rips away the very intention, direction and passion made by those who could do the work without a program that cobbles together works by people who did not consent to their works being manipulated and then processed into work they had no hand in. The use of Generative AI has caused many within the creative fields to be scrutinized and at times denied employment within the industry based on speculations of AI manipulated works. Technology like this should be used to help elevate those within fields that could best utilize this to bring out their full potential, not to allow people to cut corners because they do not wish to put in the work that someone took days, months, even years to perfect and craft. The user is only as good as their tool but if the tool is nothing more than a destructive force then it has no benefit for its purpose.
