General Comment

AI in its current form needs to be reconsidered from the bottom up. The main uses in day to day life have been a wasteful use of environmental resources, have added extra steps of once simple processes, and have been an outright stain on all creative endeavors. It not only enables theft but also produces continuously lackluster images, writing, and code that have taken jobs from hard working people in all artistic fields. It would be one thing if AI streamlined things humans can't do well, but the implementation of the technology is largely used to do things machines can't do well to replace real humans can and would do it better.
