

PUBLIC SUBMISSION

As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-wwlu-af77
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4091

Comment on FR Doc # 2025-02305

Submitter Information

Name: Adam Pendleton

General Comment

The current "industry leaders" are stealing trillions of dollars worth of assets from real creative people and spending billions in computational costs in order to develop tools for which vanishingly few people even find any utility. These charlatans are looking to leave the public and government leadership on the hook for untold billions of dollars in exchange for products that simply aren't wanted or useful, on top of being massive, unabashed theft. With these people at the helm, we are both going to lose the "AI War" and dramatically diminish the United States' cultural footprint with a panoply of sloppy, slapdash nonsense that will displace real American talent : the very talent whose fruits these people MUST steal in order to create their silly products.

The real way to come out ahead in the "AI Wars" is to fund serious, broad-spectrum research in computational and materials science that can drive authentic advancements in the products that private companies are able to offer, rather than the current hegemony's strategy of putting lipstick on a pig and calling it the next great American beauty. This research should be both private and academic, but I am concerned that both private practice and universities are getting the short end of the stick in the current political landscape. We need a serious course correction, because right now we are going to fall very, very far behind in the real fight.
