General Comment

Large Language Models ("AI") is fundamentally incapable of generating novel information, and allowing it access to more, copyrighted information will not solve that issue. It is only ever able to reference the information it has in storage. It is also prone to errors in basic information and mathematical calculations that would not stop a knowledgeable person for a moment. The use of AI sought here is to attempt to replace workers by lowering employment costs; it will only lead to less people working all for less pay and worse outcomes.
