General Comment

The technology often referred to as Artificial Intelligence (AI) as it applies to artistic endeavors such as writing and the visual arts, is not a valid structure, and stifles creativity. It is, quite literally, a plagerism machine, that steals the work of others to create a significantly inferior secondary product. I believe that as it stands, where the varied AI companies such as MidJourney and others are allowed to use publicized work to feed their data sets, is a disasterous structure. It will harm our creative output and place the United States in a terrible competitive poosition.

AI can have positive uses, such as processing datasets and predictive analysis in research and scientific applications, but it is disasterous in the creative arts.

Please restrict AI usage in creative endeavors to the use of materials that are Public Domain; creators should not have to fear that their income source will be stolen by those too lazy to learn how to produce their own art and writing.
