General Comment

This is an insoluble action that will have catastrophic effects across the entire country, including our very own government. Already there is a flood of fabricated images and audio files created by AI already infecting every section of the internet. AI scam calls are mounting. Fake images are replacing authentic ones, furthering the spread of misinformation. AI writing books and articles are filled with flawed, sketchy, and outright incorrect information that can cause serious harm or death to people. Putting so much reliance in the hands of AI will not further advance us as a country. It will destroy more sectors of industry and society. AI replacing the human workforce will increase unemployment and ultimately lead to universal stagnation. It is a technology that is still rife with flaws that will only compound them if left unchecked to scrap every bit of information it can. The number of violations in copyright and breach of NDAs will sky rocket. To remove the limits of this technology and allow it to run rampant with no compensation is an anathema to everything to the ideals this country stands for: that hard work should be rewarded and praised. Giving that freedom up to a machine that has no conscious and is only a tool for thieves to profit is neither rational nor sane. And I can't help but question the integrity of someone who would willfully open the door to a thief and let them take what they wished, if they too are also in kahoots.
