General Comment

Re: National Science Foundation's Request for Information on the Development of an Artificial Intelligence (AI) Action Plan

I am an artist who has the privilege of working with other artists as part of my dayjob in merchandising. I have experienced the struggle to get paid a fair wage for art (illustration, design, animation, etc) firsthand and I take pride in being able to ensure artists are compensated fairly at the small US company I work for.

I, as well as the countless artists I work with, have spent years of our lives building our skills and knowledge so that we can create work that is of value to our clients and is enjoyable to the public.

AI companies are now arguing that my work and the work of all these artists I work with are "fair use" because it's available to view online. They're trying to alter copyright laws so they can scoop up all of our hard work so that their systems can regurgitate it into an approximation of art. Not only is this an affront to art, but it will destroy countless small businesses like my own independent business and the small company I work for by directly competing with us WITH OUR OWN STOLEN WORK.

Copyright isn't perfect but it exists for a reason - to protect artists and help ensure they can survive on the work they create. Do not let AI companies disregard copyright. This will not encourage innovation or encourage artists to create more - it will drive us out and force most artists to stop creating.

AI companies cannot be allowed to use art without the consent of the artist. What they are doing is not derivative and not fair use. They are building their apparatus directly on stolen art and stolen labor, and that must stop.

If AI is to be allowed to continue then it must only do so with consent and with transparency. Introduce methods of licensing work. Require all training data sets to be opt-in only.

And do NOT allow AI to operate in a way that will destroy our environment. What is the point of art at all if we can't survive to enjoy it?
