General Comment

AI can - and should be - be used as a tool to enhance workflow and to be provided as an asset for use within industries.

However, it should be kept in mind that doing so may negatively affect certain industries in such a drastic enough way that it may damage the livelihood of the common people.

If it is to be implemented in any form, it should be in such a way where it is impossible to damage, negatively affect or otherwise be a detriment to people's careers and/or jobs, whether directly or indirectly. People should not lose their work for whatever comes out of this.
