General Comment

This would have catastrophic short-term and long term consequences for all artistic and creative businesses in the US. Allowing AI to steal with impunity will benefit a small handful of tech startups at the expense of every writer, artist, actor, singer, songwriter, director, cinematographer living today, and everyone they employ. It will flood all markets with low quality slop that infringes on copyrights. It will be the end of art.

You know this is wrong. The only reason it's being proposed is that people in power are friends with those who stand to make money from AI being perceived as making progress. But it's a dead end technology. It may get 'better', but it will never be able to replace humans. You should not be making laws based around the idea that it might someday be able to do something it's proven so far incapable of.
