General Comment

As an artist who makes their livelihood from the creation of original writing and illustration I see absolutely no value in the further development of generative artificial intelligence. To take the development of generative AI a step further and allow companies such as Open AI or Google to train their AI models on copyrighted materials would be an egregious offense that would amount to stealing from the artists who created the original work. This request from Open AI only demonstrates that the technology itself is void of any inherently original creation and cannot exist without exploiting the work of others. They're creating a problem where there was none to begin with, and they seek solutions that necessitate stealing. If the business model of companies such as these cannot exist without properly citing and compensating the creators of the original work, then perhaps the companies should not exist at all.
