As of: March 21, 2025
Received: March 15, 2025
Status: [REDACTED]
Tracking No. m8a-x0rj-q7xd
Comments Due: March 15, 2025
Submission Type: API

Docket: NSF_FRDOC_0001

Recently Posted NSF Rules and Notices.

Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4155

Comment on FR Doc # 2025-02305

Submitter Information

Name: Paul Philion

[REDACTED]

General Comment

I am a professional software engineer with degrees in Computer Science, Math and Philosophy and 35 years hands-on experience.

Based on my direct experiences with existing systems and reviews of performance results: While language model-based neural networks can be effective for specific tasks for which they are specifically trained, they have consistently shown poor results in most general cases, and produced harmful results in many cases.

From my professional experience, these general case system will not benefit from more training, using larger power plants and more GPU cores or throwing more data (like the set of all copyright-protected data) at it. Further, training for specialized tasks doesn't require those resources either.

I state clearly: NO to all copyright-protected data without specific license.

I would also assert that all legal liability for use of copyright-protected data and *reproducing* similar materials can only lie with the company producing the models that violate copyright.
