## General Comment

Under no circumstances should any AI business, product, or service be exempted from copyright law for any reason, nor should any AI company or user be immune from lawsuits concerning same. These companies build their libraries based on theft of copyrighted artistic material, words, and images. It is no different than piracy. No company or government should use stolen material for AI production. Humans produce works stolen by these AI companies and receive no compensation. This is theft of labor and economically damaging to writers and artists. Generative AI steals my livelihood as a writer, holds no benefit for the future of America, does not produce correct information, and is nothing more than a snake oil scam on the American people.
