General Comment

I am very concerned about this initiative for multiple reasons.

* Our rush to embrace AI for content development is a disaster for individuals who are producing and publicizing original work. The "unnecessarily burdensome requirements" referenced in this plan are those that protect artists and writers from having their work used to train AI models without their permission. Removing these requirements devalues creative work and disadvantages individuals in favor of large tech companies.

* As a scientist and educator, I fear we are rapidly approaching an AI singularity in which no original ideas exist because AI is simply feeding on itself and regurgitating old results over and over. CREATIVE WORK SHOULD BE FOR HUMANS. There are no shortcuts to true creativity and innovation. AI has a role in assisting with tasks our brains cannot handle, but it cannot generate new ideas. Pretending it will solve all our problems is a dangerous delusion.

* AI is an enormous water and energy hog that is accelerating our greenhouse gas emissions and reliance on fossil fuels. It needs to be developed cautiously and with an eye toward sustainable energy sources. Removing restrictions on its use and development will have grave environmental consequences.

I strongly oppose this initiative and urge you to reconsider. We don't have to do everything Elon Musk thinks is a good idea -- in fact he doesn't have a good history of being right. Let's take things deliberately and in consultation with the people who will be most affected by unrestricted AI development.

Thank you,
Jennifer Hoffman
