General Comment

Good evening,

I'm a freelance visual artist, art teacher, and a concerned American citizen. The health of our country, our environment, and taking care of small businesses are all important to me. I have illustrated a children's book, created commissions, and use social media to promote my business. I have also taught elementary, middle school, and high school art as well as classes at a local art museum for all ages. As an artist, teacher, small business owner, environmentalist, and American, I am deeply troubled by the unregulated development and deployment of AI. The AI-art generators are being trained by art created by humans and this is a concern of mine. There are so many copyright infringements of said training and image generation. My livelihood will be affected. Yes, I am a teacher but as a single woman living in the city I depend on a second income because teachers aren't valued enough due to it being a predominantly women field of study. Historically and financially this is an undisputed truth. The children I teach benefit from reading the books I illustrate and are more inspired by works as an artist. I want to encourage them to chase their hopes and dreams as artists, but the unregulated use of AI is crushing the hopes and dreams of American children. We must protect our children's right to create art without them having to fear their future jobs will be taken away by a soulless machine. I urge you to consider the children of our country whose dreams will be snatched away by AI, which is designed to steal art, even the art of children. The current government is hastily attempting to enhance America's AI dominance and to compete with other nations in the development of AI and therefore is neglecting the flourishing and competitiveness of human artists. Also it is potentially ignoring long-standing legal protections afforded to the creations of said human artists. As someone who loves the beautiful natural landscapes of the United States of America, I am deeply saddened by the environmental harm AI creates due to its excessive use of power and water. Please also consider how alarming the wildfires have been in North America recently and how they will only get even worse with AI's wasteful use of water. With unregulated and unrestricted development of AI this will surely affect the health of American children. I myself wish to have children of my own someday, but I want them to be in a country that actually cares about their health, their environment, their culture, and their rights. AI has already damaged our planet so much and I feel I must stress that this could make such a worse impact on our future, our children's future, and our children's children's future. I implore you to be on the right side of history and consider the lives of American artists, art lovers, small business owners, hobbyists, and anyone who respects and wants to preserve American culture through art creation. We need to be the kind of role models that will make our descendants proud and stand up for what's right, not the kind that endorses stealing and damaging our beautiful country.

Regards,

A concerned American citizen and teacher
