General Comment

Generative ai is mediocre and lazy technology. I'm not interested in the US being "the leader" of ai tech. I'm interested in the US maintaining a strong lead on education and employment, two things that are threatened by putting all this time and money into generative ai. Copyright laws allow the U.S. to be a major leader in creative exports like shows and movies. Why would we give that up, disincentivize hollywood, authors, artists, etc. in favor of technology that burns money? Ai hasn't made any creative works worth considering, and now we're supposed to disincentivize the people who make actually quality cultural exports in favor of continuing to train models that have yet to prove their worth the investment? This is a complete waste of money, and I'm sick of it being prioritized over actually worthwhile investments.
