General Comment

AI has been almost nothing but a scourge on the modern internet. It's something the vast majority of people never asked for, but it's corportations that push this garbage into every application imaginable, whether it is useful or not. It makes it harder to find the things you are looking for without AI slop taking up space. In addition, generative AI models are a very real threat to any sort of creative types, not only to their ability to make a living, but also the dilution of artwork into a generic, homogenized slop, with no room for vision, intent, style, etc. There's valid uses for AI out there, sure, but it needs more regulation, not less, if we want a more positive society. It's not about being the leading power in every economic aspect. There's just more to a worthwhile existance than that.
