General Comment

AI training done without explicit consent of those whose data it's being trained on is theft and should be treated as such. Any organization, company, or individual creating or using a system that is trained on such stolen data is deliberately and knowingly stealing intellectual property. There is no place for such tech in any government that wants to be taken seriously.

Shoving AI into everything is very much like the failed attempt to shove NFTs into everything just a few years back - a poorly designed scam made to fill the pockets of those whose pockets are already full. It does nothing to benefit regular people, only in case of GenAI it directly harms those who work in creative fields. Thousands and thousands of people have already lost their jobs due to their superiors implementing AI-based features or their clients choosing to use AI-generated elements over original creations. It hurts the economy in the long run as more and more people are being mindlessly replaced with something that isn't even remotely close to producing results of the same quality.

That is not to mention the horrifying ecological consequences of using such tech without regulation, similar to crypto mining and NFTs. All such technology should be heavily reviewed and regulated instead of being used mindlessly with no consideration for the planet's limited resources and its population.
