Comment On: NSF_FRDOC_0001-3479

Request for Information: Development of an Artificial Intelligence Action Plan

Document: NSF_FRDOC_0001-DRAFT-4219

Comment on FR Doc # 2025-02305

Submitter Information

Name: Kelsey Skonberg

[REDACTED]

General Comment

I oppose the presidential action "Removing Barriers to American Leadership in Artificial Intelligence," and I am calling for a review of artificial intelligence under current copyright law.

As a visual artist, media producer, and science journalist, I have no incentive to innovate if I have no ownership of my work. The 15 years I have spent developing my body of work will mean nothing if someone scrapes that information to train an AI and pad their own portfolio.

Open AI released ChatGPT to the public nearly two and a half years ago. In that time, we as a society have received plenty of evidence that the AI industry is under immense pressure to deliver a return to investors. As a response, companies have released products that fail to deliver on their promises of accuracy and reliability. Google's "AI Overview" and Gemini often return false or dangerous information. Generated news articles and images flood the internet without any kind of AI label or fact checking. And even at this early stage, the resources it takes to run AI damage our already strained energy grids and ecosystems.

It's time to acknowledge that AI is not a cure-all, is not built for widespread use, and needs more time in the oven. During that time, we need to build a code of ethics that allows America to continue to be a destination for artists and creators. We must also hold companies accountable for AI-generated misinformation.
