General Comment

I do not believe that AI has a place in the government. It is a fickle technology that is prone to mistakes and can be used as an excuse to prevent accountability. If an AI makes an error - let's say with something like a drone strike and it hits innocent people and not targets, who is held accountable? A human did not sign off on the decision, an AI did, so who takes the blame? Important decisions like this must be made by men and not zeros and ones.

In addition to this, it is absolutely laughable that OpenAI thinks that them being able to steal from copyrighted works is a matter of national security. It is not national security that they be able to freely steal the IP of different companies and artists so that they can train their AI models, disenfranchising those two groups in the process. I am an artist. I get my livelihood by drawing and illustrating. My own work is at risk with these models even existing. By allowing them to get past copyright with no repercussions, will not only harm many different companies, but will also harm millions of workers like me. AI profits off of theft. Its models cannot exist without stealing the work of humans. A product that cannot exist without being criminal, should NOT exist. If OpenAI cannot exist without stealing, then it should NOT exist.
