General Comment

While current AI usage and innovation is in my opinion inadequate compared to what resources it consumes and uses to actually have something close to functionality for everyday usage. It very much needs to be kept with some restriction to what it is allowed and not allowed to access and use as its base for learning. Infringing on copywrite of both corporate and induvial assets and intellectual ownership in any aspect; be it arts, literature, or other such areas of possibility that it would draw from in unacceptable. This would open the ability for AI to simply run unchecked and unrestrained with no liability or way to hold it at fault for anything it does. Allowing quite simply, criminal activity or theft, misinformation and deceit to occur on a scale we have yet to see and encouraged to do so when no oversight is set in place.
