## General Comment

Calling it “Artificial” “Intelligence” is flimsy at best, and dangerous at worst because this isn't intelligence at all; it's a wood grinder that takes the work of others and regurgitates what it *\*thinks\** the concept it got fed back to the chucker about what it “thought” the chucker might like. Google and/or OpenAI might think it's better than the creatives and hard workers they're stealing from, but tell their “search engines” or “learning models” that they're feeding lethal information that will kill people without a care in the world. It will not listen.

This is nonsense, we've been at a fine pace so far with our current laws, don't pass the stupidity on, let it die
