General Comment

There are not enough regulations regarding AI. the thought of rolling back what few things are in place to protect people's art, lives, and personal data ... Absolutely astonishing.

AI isn't "smart" it's a complete waste of resources. There are already tools to do the things AI is trying to replace, and AI is so so so so much more harmful for the planet than things like... Doing your own Google search.

The American people do not want to freely give data to corporations that are already causing harm so they can create more harm!

the idea that AI is the way forward is childish and an absolute ignorance of the state of climate change on our entire planet.

We only have one planet. We need to take care of it.
