General Comment

I think this is a terrible plan for everyone involved. Here is an article that I have written about AI Ethics and Metaethics: https://substack.com/home/post/p-135706040?utm_campaign=post&utm_medium=web. The short version is that the plan proposed here violates all the tenets that we as a society claim to value. If you truly believe it is ethical, I will have lost any and all respect for you as pond scum let alone as human beings.

I kindly recommend that you grow a backbone. This will prove disastrous for millions, if not billions, of people. We have tried giving companies with "new" technologies carte blanche before and that went SO WELL every single time. Even accepting an argument that this is necessary for the continued development of AI technologies, which seems like an a priori fallacy in accepting that this is an inherently good thing in the first place, giving private entities this type of power will prove disastrous by concentrating near complete power over all publicly or semi-publicly available information.

Of course, just about everyone in this administration seems to find some perverse joy in contorting themselves to acquiesce to the new corporate power of the week. I hope this does not fall on deaf ears given who could see this comment, but I am not optimistic. On top of concentrating power in the hands of a few people with dubious morality creating an incredibly vulnerable weak point for an entire industry, SUCCESSFUL implementation of this plan would require a complete overhaul of every notion that American society has about copyright. Setting aside the large issue that is the ethical concerns poised by this plan (which, let's face it, if you were truly concerned about that point, this plan wouldn't be a serious talking point right now), the federal government is not in any position where it could successfully implement such overhauls right now. And no, sitting back and doing nothing does not constitute successful implementation; a trained dog can do that.

On the topic of ethical concerns, I do not wish to hear anyone say that they have seriously considered problems poised by this plan and say that they think that there are few to no issues. The livelihoods of creatives will be further destabilized than they already were; entire companies will be put at risk with a lot less options for recourse. In a country that primarily has a service based economy such as America, we could be talking about an apocalyptic scenario within a decade or so.

Lastly, the one thing I want you to consider is the following problem. Think of the absolute worst person you know. The worst person that you could possibly think, that you have ever heard of or interacted with. Now, would you want to give them the type of power that this plan grants? Odds are, you don't know everything about the people in charge of companies like OpenAI. The fact of the matter is that you could be giving power to the worst person you know. Do you want to take that risk?
