General Comment

The only action that should be taken is to leave gen ai behind and let it wither on the vine. This is a bad investment of time, money, and resources.

Sam Altman and other ai hucksters have sold you snake oil. They promise the moon but fail to deliver anything more than a chatbot. Look with your eyes at how often the goalposts get moved. Look with your eyes at how laughable google search results have become. Look with your eyes at Apple intelligence mangling news headlines to the point of malfeasance. It's a pyramid scheme, and at this point, any investment in this technology will leave you holding the bag when the bubble inevitably bursts.

It's not too late to back away. If gen ai is so powerful and useful, it can surely stand on its own merit, no? Did we have to force the iphone onto a reluctant populace to convince them to add it to every aspect of their life? No because it wasn't made of smoke and mirrors.

Even if you ignore the environmental impact, the outright theft, and how pathetic it sounds when people say they can't write an email without chatgpt, you cannot deny that this is a tech sector cash grab meant to funnel wealth from gullible CEOs into OpenAI's coffers.
