## General Comment

Artificial intelligence in its current form is a wasteful solution in search of a problem. Microsoft wanted to reopen a nuclear reactor just to power their AI farms, what about the American people that could use that power for their homes? We used to have search engines that showed us what we were looking for, now Google and every other search engine are polluted with AI generated misinformation and it wastes my time and pisses me off. Literally what has AI done to improve the lives of the American people so far? Jack s&^% that's what. It's only made our lives more inconvenient, disrupted tech and art jobs only to beg for the workers to come back once their managers realized how bad the AI was at replacing their human workers.

The blatant disregard for copyright law expressed by AI proponents is insulting, what makes them above the law? There is no legitimate reason for AI companies to be able to use material without permission, the progress and profits they've made so far is on the backs of artists, writers, and engineers that they've stolen from. The output of generative AI is by definition derivative of the data that the model is trained on, there can be no new ideas generated by these programs. It only reinforces biases that unconsciously get transferred from the human programmers and the training data they select.

These AI bros are con men, just like the crypto bros before them. These technologies are wasteful and only serve to benefit the handful of people developing it at the expense of everybody else.
