General Comment

I firmly do not believe that anyone, least of all giant multibillion dollar corporations, should be given a free pass to use and resell copyrighted content as they please without permission from or compensation to the original authors. This type of exemption flies in the face of everything our copyright system is built on, and will only serve to stifle human innovation, creativity, and ingenuity. Generative AI does not "create" anything new, just regurgitate (often incorrectly!) existing information. It is a passing fad given an important sounding name, and I don't see this type of AI being important to our country's future. Please reconsider allowing OpenAI and others to skirt around copyright law, as the potential for severe harm to jobs, to art, and to people far outweighs any benefits.
