General Comment

As a lifelong citizen of the United States of America, I understand the importance of maintaining dominance in the technological sector in order to stay ahead of our adversaries. However, I don't believe that such dominance is worth the trade off letting the private sector run wild with even fewer restrictions than they already had.

Companies in the private sector that have heavily invested in AI are interested in training their AI models on copyrighted material, much of which is material that's created by hardworking Americans and legally considered as belonging to them. If these AI companies are allowed to train on material that doesn't belong to them, then it's akin to theft of one's property. Therefore, it should either not be allowed, or there should be some form of monetary compensation given to those who have had their work used by AI companies.

And that's only touching on the matter of copyright infringement. There are other concerns that lessening AI restrictions involves, such as privacy, ethics, and avoiding raising the unemployment rate. There is much potential for AI to coexist with sane, commonsense, and fair regulation. I highly recommend using the policies outlined in Executive Order 14110 as the framework for a new set of AI regulations that will benefit the common American citizen.
