General Comment

As a veteran and career information security expert, the plan to allow AI companies to train their models on creative content they don't own without compensation to the creators is abhorrent. There are extremely powerful privacy implications involved. The data gathered WILL have PII and other sensitive information in it. Any large scrapping of creative content cannot fail to also gather PII that will be forever baked into the model.

This is also just outright copyright infringement on a massive scale. It may sound like Generative AI can replace creative workers, but they can't. The products will always be inferior as no true creativity exists. But that won't stop massive implosions of creative industries. This will hurt America in the short and long term. There is NO public benefit to this plan.
