General Comment

Generative AI is of no use to humanity. It creates inaccurate guesses based on what it thinks the most likely outcome is from the models it is trained on. These AI training datasets consist of vast swaths of copyrighted material stolen from individuals without their content, scraped by AI companies from the Internet without prejudice. AI "art" uses works stolen from human beings to create unappealing simulacrums and is employed by corporations who don't want to pay creative talents for their work. Companies are employing generative AI to generate content and decision-making models in order to slash American jobs in pursuit of profit. The marketing hype around generative AI is contributing to e-waste and pollution, and the current focus on generative AI harms legitimate uses of analytical AI such as cancer research. I am asking the Federal government to regulate generative AI out of existence.
