General Comment

I do not believe that Ai holds a place in the future of entertainment or the free market. While it can be utilized to mass-produce media and utilized for corporations to make more money, it will hurt the citizens in the long-run. Specifically artists who were previously hired to work within the entertainment industry. This technology lifts from their own work, and utilizes it unknowingly in order to train models that are a plague on the environment. None of the artists who were scraped have consented to their work being taken from them, and those who have were forced to do so retroactively.

Giving Ai corporations free reign over the ability to copyright Ai spits in the face of the common artist who worked to gain the skills which they have presently. The small artists who make their livelihood off of their work. It cheapens the value of art, and therefore our culture as Ai cannot create works of proper meaning. All it does is flood websites and forces a user-base who already dislikes it to engage with it.
