General Comment

As a person working in a creative field, lifting another person's work wholesale with no permission or credit would be wholly inappropriate (and wholly illegal). Why is it any different if a computer is doing it? Generative AI is an incredibly dangerous thing for our entire cultural output & can very well destroy entire industries and livelihoods. Reducing someone's blood, sweat, & tears to a series of zeroes & ones and leaving it an emotionless shell is anathema to any understanding of human cultural exchange as well as simply absurd. One of the things that makes us human is our ability to pour our lives, experiences, emotions, and souls into these artistic vessels as an indelible message to the universe that "I am here!" A computer will never experience nor understand and cannot experience nor understand the breadth, depth, and emotional content of the human condition. To even pretend otherwise is obscene and an affront to every human that lived before you and will live after you.

Thank you for your consideration.
