General Comment

AI (which is not even true Artificial Intelligence, it is Machine Learning) requires the creative labor of actual people in order to function. It is wholly unethical to allow machine generated applications to scrape the work of others who did not consent to their work being utilized for this purpose, in order for those who did not put in any of the work to profit. This exists solely to devalue the skills of real people who deserve to have their work retain its integrity. AI cannot function on its own to create, it can only copy and steal the work that already exists. It will never make something new, and the push for AI in so much of the current zeitgeist is disingenuous in its intentions. The people pushing AI want to make actual creatives obsolete, while still profiting off their work. It is a blatant attempt to avoid giving credit, both in name recognition and monetarily. AI doesn't take into consideration the quality and meaning of the work it scrapes. It consumes an excessive amount of electricity just to run as well, draining our country of its water resources in the process. AI is soulless, exploitive, and wasteful. It will never make real art. The American public does not favor AI, and public interest has drastically declined since it became culturally relevant in the past few years. It is, at its core, a scam, and does exponentially more harm to US citizens and our environment. Anyone who cares about those two things will not let this continue.
