## General Comment

Generative AI programs, whether text or image based, need to train on large data sets. The currently available offerings, such as OpenAI, Google's Gemini, Meta's search function, X's Grok, all have trained on the illegally obtained copyrighted material of writers and artists. It's theft and the companies behind it have admitted as much in various court cases. Not only that, it's filling our digital spaces with subpar crud, misinformation, and terrible "art". Artists and writers should not have their rights abuses just so these large corporations can continue to shove their unwanted product down everyone's throats. Its integration into areas such as education, media, and law have already degraded everyone's experience and proven harmful.
